Interface consolidation plans in ARC7

Wednesday, 4 May 2022 16:35 (1 hour)

Time to figure out what to do with all those legacy, semi-legacy interfaces we have in ARC6 now that the REST interface is production-ready.

This session will try to decide which interface to keep and which one we can label obsoleted or even remove from ARC7.

By ARC inteface we mean both the job management (gridftp-job, emies, REST) AND the information retreival intefaces (LDAP-ng, LDAP-nordugrid, LDAP-glue2, glue2-xml, rest-xml)

Session Classification: Day 1

Track Classification: ARC7
